

Secure your agentic ecosystem.

AI agents, SaaS integrations, and non-human identities move your sensitive data at machine speed, beyond the reach of legacy tools.

Your agentic ecosystem is under attack. And you can't see it.

In 2025, over 1,000 organizations were breached through trusted SaaS integrations. They had SSPM. They had CASB. They still couldn't see it because attackers abused OAuth tokens and API connections to move laterally through normal-looking pathways. No credentials were stolen, no apps were misconfigured. The integration layer was the attack surface. Now, AI agents are accelerating the same threat at machine speed.

Most security architectures see the front door but miss the engine room.

Vorlon is the Agentic Ecosystem Security Platform. Powered by patented DataMatrix™, Vorlon observes data and operations in motion, building a live model of your ecosystem with no agents, proxies, or disruption.

Vorlon was recognized in **"2025 Gartner® Emerging Tech: Intelligent Simulation Accelerates Proactive Exposure Management report."**

According to Gartner, "Intelligent simulation is poised to transform security operations by shifting focus from reactive detection and response to preemptive cybersecurity."¹

Three ways Vorlon gives you back control over your agentic ecosystem.

Ecosystem-Wide Observability

See every data flow across SaaS apps, AI agents, integrations, and non-human identities, sanctioned and shadow. Answer "which data, which agents, how far" in minutes.

Context-Based Behavioral Detection

Detect anomalous access, agent-to-SaaS movement, token misuse, and mass exports. Each alert includes the integration, data, identity, and blast radius.

Coordinated Actions

Manage posture via smart to-do lists. Revoke tokens or restrict connections in two clicks. Route step-by-step remediation to app owners or trigger automations across your SIEM, SOAR, ITSM, and IdPs.

Which AI agents, NHIs, and users post the most risk? Vorlon tells you.

Context Drives SecOps Prioritization

Low to High Priority Incident Response

Unknown entity
Outside of allowed IPs
Geolocation anomaly

+ Elevated privileges
+ Sudden spike in traffic
+ IP with bad reputation

Revoke!

+ API endpoint contains PII
+ Identity part of a SaaS breach

Common agentic ecosystem security challenges and how Vorlon helps

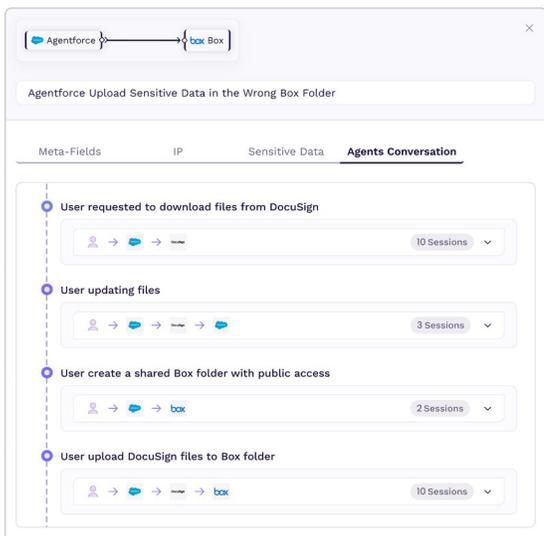

Challenge

- ❌ AI agents and integrations move data at machine speed, outside security's line of sight.
- ❌ SaaS and AI security is fragmented across scattered tools.
- ❌ NHI's outnumber users 50:1 (451 Research). Traditional IAM doesn't track them.
- ❌ SaaS vendor breaches expose sensitive data with no way to scope impact fast.
- ❌ SecOps workflows don't cover the agentic attack surface.
- ❌ Compliance frameworks demand continuous monitoring and auditability.

How Vorlon helps

- ✅ Discover all agents and integrations. Map every data flow. Detect anomalies at runtime.
- ✅ One platform: discovery, data flows, identities, detection, and response.
- ✅ Unified NHI, agent, and user governance. Behavioral monitoring tied to sensitive data.
- ✅ Understand blast radius in minutes. Two-click remediation.
- ✅ Exposure management, incident response, and threat hunting across your agentic ecosystem.
- ✅ Audit-ready evidence mapped to SOC 2, HIPAA, PCI DSS, GDPR, ISO 27001.

Agents, AI tools, and SaaS have converged. Secure them as one.

Vorlon Agent Flight Recorder stores agent actions and monitors for risky behavior, like Salesforce Agentforce uploading sensitive data to the wrong Box folder.

"Vorlon tells us what SaaS and AI apps we have and what's flowing between them."

Kelly Haydu
VP, InfoSec, Technology & Enterprise Applications

"AI is everywhere. You must know where data is going. We had our answers in less than a day with Vorlon."

Anthony Lee-Masis
CISO & VP IT

"API keys, OAuth tokens, and third-party app credentials are still where user accounts were ten years ago. Vorlon closes that gap."

Eric Richard
SVP, Engineering

"My SOC is resolving security issues 10 times faster."

Ran Landau
CTO

About Vorlon

Vorlon is the Agentic Ecosystem Security Platform. Backed by Accel and trusted by Fortune 500 leaders. Learn more at vorlon.io.
